

# Interacção Pessoa-Máquina

## 2018/2019

### Final project

#### **Stage 1: Project proposal**

**Objective:** Elaborate the project proposal and set up the project web site.

#### **Description**

The project proposal should be 1-2 pages long, including:

- Project title
- Group members: name and number of every group member (must be from the same lab class)
- Problem description: Describe the problem you will try to solve during the project. You should try to play the role of the users and describe their needs and difficulties – not the solutions for their problems.
- Target users: Shortly, characterize the target user population.
- Project goal: Describe the main goal of your project and a possible solution to the problem. You are not absolutely committed to this solution. You can modify your solution during the project development, if the evaluation procedures recommend a different solution.
- In case it exists, identify at least one application that competes with your proposed project, indicating what is good and bad about that design. Your project is supposed to fix those wrong design issues.

#### **Deadline:**

- Discussion in the class September 17/19; report delivery (in class) October 1/3.
